Developed by Infor. Delivered by TouchstoneBI.

For a solution for Infor d/EPM to truly deliver value to your business you need a partner that truly understand your business. Our expertise at deploying Infor d/EPM across diverse sectors ensures we can predict any potential pitfalls and can ensure a faster and more cost effective deployment. This expertise is backed by our solutions such our ETL Agile data warehouse technology that can help ensure your business intelligence project truly delivers on your goals.

Budgeting, forecasting and planning

Due to functionality deficiencies in systems and their siloed nature, businesses lack the ability to make sense of their own data. Infor d/EPM gives you the visibility you need to aid decision making.

Analysis

Gain a single version of the truth. See a true picture of how your business is performing using real time data from your business.

Forecasting

Forecast how you want, when you want, always with up to date information and through an easy to use and intuitive interface.

Modelling

Analyse the impact on your bottom line in any numbers of ways: acquisitions, disposals, currency changes, new products, price changes etc.

Consolidations

You may be dealing with a large number of legal entities across multiple geographic locations. Infor d/EPM automates the consolidation process, making the entire process faster and with reduced risk.

Powerful

Consolidation is faster and more flexible than ever before. Consolidate how you wish – by product, sub group or company.

Accurate

Deliver your accounts faster and more accurately – all while avoiding manual re-keying and time consuming, repetitive administration.

Compliant

Flexible security and control. Proactively monitor your systems for transaction anomalies and violations of segregation of duties controls.

The case against spreadsheets

- One cell error can lead to a cascade of errors
- No version control
- No auditability
- Inadequate security
- Labour-intensive

58% accountants say frequency of spreadsheets errors is either "fairly high" or "very high".

72% of finance teams rate spreadsheet errors as a major risk to their organisation.

Spreadsheets stats from research carried out by ClusterSeven.
